

ON THE DIACHRONIC DEVELOPMENT OF A HUNGARIAN DECLARATIVE COMPLEMENTISER

1. The problem

Function of Modern Hungarian *hogy* ‘that’: introduces finite declarative content clauses

↔ Old and Middle Hungarian: various functions

e.g. *hogy* appeared in comparative or conditional subclauses

Complex complementisers:

- several combinations did not survive into Modern Hungarian (e.g. *hogymint* ‘that than’)

- other combinations still exist (e.g. *minthogy* ‘than that’)

→ from a pair of combinations *hogy*+X and

X+*hogy*, always only one survives

- also appeared in relative clauses: combinations with *ki* ‘who’ and *mi* ‘what’: *hogyki*, *hogymi*

Proposal:

- *hogy* developed via the relative cycle

- *hogy* became a general marker of declarative Force in Old and Middle Hungarian

2. The relative cycle

Relative cycle: a pronoun becomes first an operator moving to [Spec; CP], and subsequently this operator is reanalysed as the head of that CP

(van Gelderen 2009; Roberts–Roussou 2003).

Reanalysis from lower C to higher C (for English *that* see van Gelderen 2009)

Economy: both steps motivated by economy

- Head Preference Principle

- Late Merge Principle

(cf. van Gelderen 2004)

3. Simplex complementisers

Development of other complementisers: by way of the relative cycle

ha ‘if’, *mint* ‘than’ and *mert* ‘because’

- originally pronouns, which came to be operators
- functional split → related operators

e.g. *hogy* ~ *hol* ‘where’

Chronology:

- functional split for *hogy* and *ha* took place before the Old Hungarian period
- position: *ha* always in the higher C head
- hogy* typically a higher C head and rarely a lower one
- for *mint* and *mert*: split only during the Old and Middle Hungarian periods
- position: *mint* and *mert* either operators in the lower [Spec; CP] or in the lower C head

4. Multiple complementisers

Two complementisers in one Left Periphery allowed in Old/Middle Hungarian

- (2) edesseget erze nagyoban **hogymint** annak el□tte
 sweetness-Acc. felt-(s)he greater that.than that-Dat. before-Poss.1.Sg.
 ‘(s)he felt sweetness even more than before’ (LázK. 140)

Fixed word orders:

hogy typically in the upper C head

→ *hogymint* ‘that than’

→ *hogymert* ‘that because’

5. Complex complementisers

Movement of the lower C head to the upper one: adjunction results in the reverse order

← Linear Correspondence Axiom, cf. Kayne 1994

- (4) semi nagob nem mondathatik: **mint hogh** leg□n istenek ania
 nothing greater not say-Pass.Cond.3.Sg. than that be-Subj.3.Sg God-Dat. mother
 ‘nothing can be said to be greater than that she be the mother of God’ (TihK. 143)

Grammaticalization: complex complementisers base-generated as such

← economy: base-generation preferred over movement

→ reverse order combinations preserved even in Modern Hungarian, whereas original C+C combinations are no longer grammatical

6. The position of *hogy*

Underlying order: typically of the form *hogy*+X

← *hogy* typically in the higher C head

→ generally combinations of the form X+*hogy* remain in the language

Exception: combinations of *hogy* and *ha* ‘if’

underlying order: *ha*+*hogy*

Evidence: intervening elements possible:

- (6) **Ha** késen **hogy** el nyugot az nap, hamar es□t váry
 if late that PREV set-3.Sg. the sun soon rain-Acc. expect-Imp.2.Sg.
 ‘if the sun has set late, expect rain soon’ (Cis. G3)

Explanation:

ha invariably in the higher C head → *hogy* could only be base-generated in the lower C head

But: movement preferred for *hogy*

→ reverse order (*hogyha*) more frequent even in Old and Middle Hungarian

7. Relative clauses

Relative clauses containing *hogy* + a relative operator possible in Old and especially in Middle Hungarian

- (7) olýaat tez□k raýtað **hog** **kýt□l** felz
 such do you that who fear
 ‘I will do such on you that you fear’

8. Functions of *hogy*

Comparatives: originally *hogy* was the comparative complementiser too

- change in Old Hungarian: *mint* ‘than’ appeared in the subclause (cf. Bacskai-Atkari 2011)
- *hogy* lost the function of marking comparative Force

Loss of specific functions → *hogy* became the marker of declarative Force only

Extension: *hogy* appeared in other clauses functioning as a general declarative C head

- appearance in a wide range of clauses: conditionals, clauses of reason, relative clauses
- the meaning of a combination *hogy*+X or X+*hogy* did not (initially) differ from the meaning of X

Later: other complementisers consistently marking declarative Force besides their specific functions

→ *hogy* no longer used as a general declarative marker
